Jiangsu Kangle Medical Devices Co., Ltd

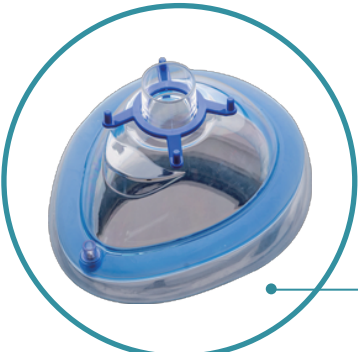

Disposable Improvised Breathing Apparatus

Resuscitation Balloon

Reservoir Bag

Anesthesia Mask

type I

Improvised Breathing Apparatus

Patient Valve &
Air Inlet Valve

Oxygen
Connection Tube

Resuscitation Balloon

Anesthesia Mask

type II

Product Features

The disposable improvised breathing apparatus mainly consists of a mask, resuscitation balloon, patient valve, air inlet valve, storage bag and oxygen connection tube. For artificial respiration of people with breathing problems. The product is supplied in a sterile state.
This product is of a simple structure, easy to operate and carry, can be adjusted at will, requires no electric devices and can be used in the occasions with or without compressed oxygen source.

Specification Configuration

Optional telescopic tube: (0.4M, 0.6M, 0.8M, 1M, 1.5M)
Model specification: KL-8016-L, KL-8016-M, KL-8016-S
Expiratory and inspiratory impedance: the expiratory (inspiratory) impedance of the disposable respirator is <5cmH2O at a flow rate of 5L/min.

The pressure for patient valve and pressure-limiting value

| Specification | Pressure:Kpa |
|---------------|----------------------|
| L (Adult) | 5-7(50-70cm H2O) |
| M(Children) | 3.5-4.5(35-45cm H2O) |
| S(Newborn) | |

Product Features

The improvised breathing apparatus mainly consists of a mask, resuscitation balloon, patient valve, air inlet valve, storage bag and oxygen connection tube. For artificial respiration of people with breathing problems. The product is supplied in a non-sterile state.
This product is of a simple structure, easy to operate and carry, can be adjusted at will, requires no electric devices and can be used in the occasions with or without compressed oxygen source.

Specification Configuration

Model specification: HXQ-I-L, HXQ-I-M, HXQ-I-S, HXQ-II-L, HXQ-II-M, HXQ-II-S
Expiratory impedance and inspiratory impedance: the expiratory (inspiratory) impedance of the simple respirator is <5cmH2O at a flow rate of 5L/min.

The pressure for patient valve and pressure-limiting value

Disposable Endotracheal Tube Holder

Product Features

The disposable endotracheal tube holder consists of a rotating nut, spring, slider, sponge pad, dental pad body, and cheek fixation belt with self-adhesive buckle.
For fixing the tracheal tube and protecting the lips and teeth during clinical endotracheal intubation. The rational design of mouthpiece of the fixator not only ensures that the patient will not bite the trachea cannula, but also avoids the oral scratch of the patient.
The oval shape of sputum aspiration hole on the fixator effectively utilizes the structural features of the fixator, facilitating the sputum aspiration operation while ensuring the firmness of the fixator.
